Business with a Telegram Mini App — From Scratch

Bot, Mini App, orders and payments — step by step from scratch — Free preview

A Telegram Mini App is a web page that opens inside Telegram itself. The customer does not need to install a separate app or create a new account — one tap on the bot's button opens your shop.

It suits a small shop because customers can browse products, place an order, and talk to you in the same place where they already chat. The shop, the catalogue, the order form, and contact are all in one place.

What is it?

A Mini App is not a shortcut to success. The products still need to be good, the prices clear, and delivery reliable after an order. The app only makes the work easier; trust comes from your service.

This guide walks you through it step by step — creating a bot, setting up the Mini App, taking orders, checking the payment rules, and learning from your first customers.

How to start — a glimpse

1. First decide what you will sell and who you will sell it to. Write down your product list, prices, and delivery rules on paper.
2. Create a bot from @BotFather on Telegram. Give it a name, username, and description that match your shop. Never share the bot token with anyone.

📚 Get the full guide in the app — 10 Stars / 10 ZERO

Open @BazarGooBot on Telegram → "🛍️ দোকান খুলুন" → 📚 My PDFs — you will find this guide there. Buying gives you both the Bangla and English versions.
