DeepSeek Tutorial

Free AI chatbot — writing, reasoning, maths, code — Free preview

DeepSeek is the AI chatbot built by the Chinese AI lab DeepSeek. You can use it completely free at chat.deepseek.com or in the mobile app — no subscription is needed for chat.

DeepSeek's model weights are open — anyone who wants can run them on their own computer. For ordinary users, the web chat is enough.

What is it?

DeepSeek has two modes: Instant (fast answers) and Expert (thinks step by step). With Search mode it finds fresh information before answering. DeepSeek is strong at writing, maths, reasoning and coding.

In this guide you will learn: how to start DeepSeek, when to use which mode, which tasks to use it for, and what to be careful about.

How to start — a glimpse

1. Open chat.deepseek.com or download the DeepSeek app.
2. Create an account with email (or a phone number) and a password; you can also sign in with Google or Apple.

📚 Get the full guide in the app — 10 Stars / 10 ZERO

Open @BazarGooBot on Telegram → "🛍️ দোকান খুলুন" → 📚 My PDFs — you will find this guide there. Buying gives you both the Bangla and English versions.
