# Google Flow Tutorial — Making Videos with AI

Google's AI filmmaking tool — make cinematic clips with Veo — Free preview

Google Flow is Google's tool for making videos with AI. Describe a shot in words and Flow makes a short video clip — with sound, dialogue and ambience. It is a Google Labs tool, powered by the Veo video model.

Flow does not just make one clip — it is a workspace. Characters and looks can be saved as 'Ingredients', the same character can appear in many clips, and clips can be arranged into scenes and stories.

## What is it?

Flow makes videos in three ways: Text to Video (video from text), Frames to Video (the part between two frames) and Ingredients to Video (video with your own characters/things).

In this guide you will learn: how to start Flow, how to make your first clip, how to write good prompts, and how free credits work.

## How to start — a glimpse

1. Open a Chromium-based browser (such as Chrome) and go to labs.google/fx/tools/flow.
2. Sign in with a Google account — you must be 18 or older.
