Grok Tutorial

xAI's chatbot — live news, X posts, images and video — Free preview

Grok is the AI chatbot built by xAI (now known as SpaceXSI). You can use it at grok.com, in the mobile app, and inside the X (formerly Twitter) app.

Grok's biggest strength is live information — it searches the web and X posts for the latest news before answering. Writing, code, reading files, making images and short videos, voice chat — all in one place.

What is it?

The free plan gives limited daily access; paid plans (SuperGrok / X Subscription) give higher limits and a multi-agent mode.

In this guide you will learn: how to start Grok, how to find live news, which tasks to use it for, and what to be careful about.

How to start — a glimpse

1. Open grok.com or download the Grok app; you will also find the Grok icon inside the X app.
2. Sign in with email, Google, Apple or an X account. You do not need an X account.

📚 Get the full guide in the app — 10 Stars / 10 ZERO

Open @BazarGooBot on Telegram → "🛍️ দোকান খুলুন" → 📚 My PDFs — you will find this guide there. Buying gives you both the Bangla and English versions.
