Midjourney Tutorial — Making Images with AI

The most beautiful AI images — on Discord and the web app — Free preview

Midjourney is a tool for making images with AI — the best-known name for artistic, beautiful and photorealistic images. It is built by Midjourney Inc. and runs in the Discord chat app and on its own website.

In Midjourney, write a description (a prompt) and it makes four different images — then you can enlarge your favourite, change it, or make a new version. The current default model is V7.

What is it?

Remember: Midjourney has no free plan — you need a paid subscription to use it (starting from the lowest plan). For free images, you can use the image tools in Gemini or ChatGPT.

In this guide you will learn: how to start Midjourney, how to make images with /imagine, how to write good prompts, and what to be careful about.

How to start — a glimpse

1. Open midjourney.com or download the Discord app.
2. Take a subscription — there is no free trial; it starts from the lowest plan. Check the official site for prices.

📚 Get the full guide in the app — 10 Stars / 10 ZERO

Open @BazarGooBot on Telegram → "🛍️ দোকান খুলুন" → 📚 My PDFs — you will find this guide there. Buying gives you both the Bangla and English versions.
