Muse.ai Tutorial

Meta's personal AI agent — tell it your goal and get the work done — Free preview

Muse is Meta's personal AI agent. An ordinary chatbot only answers questions; Muse goes one step further — give it a goal and it plans the work itself, does the tasks, and finishes with your permission where needed.

Muse is powered by the Muse Spark model and runs for each user on a separate virtual computer in Meta's cloud (Muse Secure VM). Your data does not go to anyone else's agent, and before sensitive actions — such as sending an email or making a purchase — Muse asks your permission.

What is it?

You can use Muse in the Muse app, on the website, and even by chatting in WhatsApp. Talking to it feels like an ordinary message — no technical knowledge is needed.

In this guide you will learn: what Muse is, how to start, which everyday tasks to use it for, how to give good instructions, and what to be careful about.

How to start — a glimpse

1. Download the Muse app (iPhone/Android) or open the website; you can also chat with Muse in WhatsApp.
2. Create an account — you must be 18 or older.

📚 Get the full guide in the app — 10 Stars / 10 ZERO

Open @BazarGooBot on Telegram → "🛍️ দোকান খুলুন" → 📚 My PDFs — you will find this guide there. Buying gives you both the Bangla and English versions.
